Wind Farms

HUÍLA . ANGOLA

Energy Sector Project - Renewable Energy

Wind Farms

Energy Sector Project - Renewable Energy

Analysis

Concession of land for the creation and implementation of solar farms for production of electricity.

Assessment

Due to its climatic characteristics, Huíla is a region suitable for the establishment of wind farms projects.

In the medium term the generated wind energy will allow an increase in the percentage of population with access to electricity in the rural areas, and will improve the population's living conditions.

In the long term the autonomy in the production of energy and the sale of energy to other regions.

Data

The establishment of wind farms should be subjected to preliminary studies to determine a proper sizing and location.

Objective

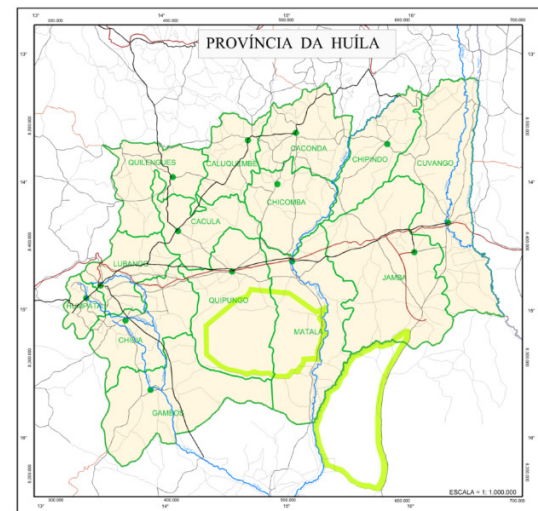

Promote energy efficiency as well as the development of new and renewable energy sources.

Promote the interconnection between all energy networks.

Increase of private investment for the renewable energy sector for the supply of a large population.

Benefits

Specific tax benefit for investments in Huíla.
